

# involving patients

“Something is going very right when most of my patients bring two or three referrals back into the practice.” There is no greater satisfaction for Dr. Michelle C. Dziurgot.

Dr. Dziurgot’s cosmetic dental practice, MCDental Care, offers patients a comprehensive scope of aesthetic procedures, incorporating the latest technology to expand its menu of treatments. Using high-tech lasers and all-porcelain crowns, Dr. Dziurgot treats patients with advanced, state-of-the-art resources and remains on the cutting-edge of new horizons. “Our foremost goal is to provide patient-appropriate care in an efficient, nurturing environment conducive to open doctor-patient interaction and complete wellness,” she says. “Our treatment plans go beyond office visits. We want to teach patients how to maximize results through proper at-home care, too.” To fulfill her goal and better accommodate patients, Dr. Dziurgot offers early morning hours on Mondays, Wednesdays, Fridays and Saturdays, seeing her first patient as early as 7 a.m. And, she also takes patients as late as 6 p.m. on Tuesdays, Wednesdays and Thursdays. “My patients have busy lives; I consider it my personal responsibility to avail myself to them, as per their schedules. Patients can even request appointments online.” By starting each morning with a team huddle, Dr. Dziurgot strives to maximize efficiency. With 17-inch monitors and Internet/DVD/DISH access in all treatment rooms, as well as a large, comfortable lobby, Dr. Dziurgot is committed to aesthetics on all levels. “Our lobby has a children’s video game area and a plasma television screen, as well as a refrigerator stocked with bottled water, complemented by soothing lavender aromatherapy,” she explains. “My patients deserve top-notch care—starting from the moment they enter my office.”

## THE BENEFITS OF LASER-ASSISTED DENTISTRY

Dr. Dziurgot is a proponent of using laser energy to enhance the quality of dental care she offers patients. In particular, when used as an adjunct during periodontal procedures, like scaling and root planing treatments, Dr. Dziurgot says that the use of a **DEKA CO2 LASER** “helps sterilize the gum pockets and **PROMOTES HEALTHY TISSUE REGENERATION** in the process, yielding no pain afterwards.” Other benefits Dr. Dziurgot has encountered with the use of her laser include the permanent removal of painful canker sores and the alleviation of pressure sores in patients who wear dentures. “When necessary, I use my laser as an alternative to a scalpel,” says Dr. Dziurgot. “My patients find this aspect reassuring. Generally speaking, I have found that the laser yields **NO BLEEDING** and helps facilitate cleaner procedures. Usually, just a topical anesthetic is needed to keep the patient comfortable. I am continually impressed with the results acheived when using a laser during my dental procedures.”
