

Prosthodontics

No adult is ever excited about losing a tooth. When a tooth is lost, it changes the bite, causing excess stress to be placed on the remaining healthy teeth. This stress causes those teeth to wear unevenly and can even cause jaw-related pain. What's more, missing teeth can also change your facial appearance, resulting in a loss of confidence and embarrassment.

Dr. Aqib Mudassar has advanced training and experience to restore and replace teeth, returning your smile to an attractive appearance and your bite to optimal function.

► Dentures

A denture is a removable appliance that replaces missing teeth and adjacent tissues. Made of resin and porcelain, complete dentures are used to replace all the teeth. When some healthy teeth remain, a partial denture can be used. A partial denture also keeps the remaining healthy teeth from shifting positions in the mouth.

Full and partial dentures improve chewing ability and speech, and support facial muscles. Dentures also enhance appearance.

Dr. Mudassar offers precision-fit dentures that do more than replace the teeth. They are precision-fit to provide the most optimum position for your jaw and bite. The results are attractive, secure dentures that allow you to speak, eat and smile with comfort and confidence.

► Bridges

A dental bridge (or pontic) is a custom-made false tooth or teeth that is permanently placed between two healthy teeth, filling in the area left by a missing tooth or teeth. The bridge is held in place by porcelain crowns placed on the healthy teeth on each side of space to be filled.

Bridges reduce the risk of gum disease, help correct some bite problems and help improve speech.

► Crowns

A crown, also called a cap, is a custom-made restoration that repairs and strengthens a tooth that has fractured, has a large cavity, has an old filling that has failed, or has had root canal therapy. Unlike an inlay or onlay, a crown completely covers the tooth.

Dr. Mudassar uses crowns fabricated of all-porcelain for strength, endurance and appearance. Crowns can also be used for cosmetic purposes, enhancing the appearance of a tooth that is discolored or misshapen.

► Implants

Dental implants are an amazing solution to missing teeth. Implants replace your natural tooth roots to permanently and beautifully hold new, ceramic teeth.

Implants are actually small posts made of titanium, surgically placed into the bone socket to replace the root of a missing tooth. A strong and durable replacement tooth, made to match your surrounding natural teeth and blend perfectly, is then anchored in place to let you enjoy laughing with confidence, smiling comfortably, and even eating your favorite foods.
